# Postpartum healing foods

## FITNESS ISN'T ABOUT FIGHTING YOUR BODY. IT'S ABOUT WORKING WITH THE CLIMATE, CULTURE AND DAILY RHYTHMS. SMART SWAPS BEAT EXTREME ROUTINES EVERY TIME

Muscat Daily · 23 Dec 2025 · 15 · NUTRITION & YOU (Vandana Chawla is an Online Nutrition Expert and a Registered Nutritionist-ukvrn Visit: https://thenutribaby.com)

The postpartum phase is a time of a huge change, physically, mentally, and emotionally. Your body has just successfully completed the incredible task of giving birth to a little one. Now, it's time to heal, recover, and rebuild your strength.

Every culture lays stress on consuming certain foods and restricting some with the key idea of healing the mum, boosting her strength and her milk supply. Nutrition definitely plays a powerful role in this recovery journey, helping mum to restore balance and energy from the inside out.

Let's move directly into the topic and understand it more deeply.

1Rebuilding with protein and iron

Protein, is an essential nutrient for tissue repair and hormone regulation. Increasing protein intake by including foods, like, paneer, fish, chicken, beans, lentils, dairy and nuts, will help to support recovery and maintain muscle tone.

During childbirth, women experience blood loss, and post-partum anaemia is commonly seen. This condition can make many mums feel, weak, tired, drained out. Taking iron-rich foods helps to replenish stores and prevent fatigue. Include lean meats, eggs, lentils, spinach, and dates. Pairing plant

sources of iron with vitamin C-rich foods like citrus fruits or bell peppers enhances absorption. Avoid taking tea/coffee along with meals or with iron supplements as they can decrease the absorption.

2Healthy fats for hormonal balance

Healthy fats are true friends in the postpartum period. They not only support hormone production but also great for mental health. Incorporate foods, like, avocados, nuts, seeds ( especially flax, chia, and sesame), ghee, and fatty fish like salmon or sardines. These foods are rich in omega- 3 fatty acids, which can help reduce inflammation and support emotional well- being, reducing the risk of “baby blues.”

3Fiber and fluids for gut health

After delivery, many women face slow digestion due to hormonal shifts or medication effects. Whole grains, fruits, vegetables, and nuts and seeds help regulate bowel movements and maintain gut health. Staying hydrated is equally important, hence aim for at least 8–10 glasses of water daily, which can be obtained from soups, herbal teas, or coconut water, milk or infused water

4Nutrients for energy and immunity

Postpartum recovery demands a boost in essential vitamins and minerals.

Calcium and vitamin D are one most important nutrients as every pregnancy means depletion in calcium levels. Hence, to support bone strength include dairy, ragi, sesame seeds, green veggies and sunlight exposure.

B vitamins boosts energy levels, include foods like, whole grains, eggs, and green leafy vegetables.

Zinc helps in wound healing and boosts immunity. Include foods, like, meat, poultry, whole grains, nuts, seeds, eggs.

A plate full of coloured veggies and fruits ensures a steady supply of antioxidants, which repair cellular damage and keep your immune system strong.

5Comforting traditional foods

Many cultures have nourishing postpartum recipes that are both comforting and restorative. In India, every state from NorthSouth or East to West, have their own traditional post-partum foods, like, methi laddoos, panjiris while in other traditions, bone broth soups, porridge are commonly used. These recipes often combine warming spices like turmeric, cumin, fennel, ajwain, known for aiding digestion and reducing inflammation, along-with nuts, seeds, and whole grains or fenugreek seeds that aid in breastfeeding and help in meeting additional nutritional requirements of new mums.

6Gentle eating approach

Your body’s needs may vary day to day. Listen to your hunger cues, eat slowly, and focus on whole, minimally processed foods rather than restrictive diets. Pamper yourself with all healthy traditional foods especially eaten during these times and focus on your healing.

To conclude, postpartum nutrition isn’t about “bouncing back”, it’s about rebuilding from within. Each wholesome food that you take will support healing, enhance milk production, and nurture your emotional balance, helping you feel stronger and healthier to take care of your little one.

You don’t need extreme diets or punishing workouts to stay fit. What you need is consistency, common sense — and a plan that actually fits real life. Fitness culture loves drama: six-pack deadlines, detox teas, and workouts that look like military training. Reality check — most bodies just want to move regularly, eat sensibly, and sleep without guilt. This feature strips health down to what actually works, without the noise.

Between soaring temperatures, late dinners and desk-heavy workdays, staying healthy here needs a local playbook. The good news? You don’t need imported superfoods or sunrise marathons. You just

need adjustments that make sense in Gulf life.
Workouts that respect the heat
Let's be honest: outdoor runs at noon are a bad idea — medically and spiritually. Climate-friendly movement options: nearly morning or post-sunset walks (malls,
corniches, neighbourhood tracks) nhome workouts using bodyweight
— no commute, no heat nswimming (low-impact, full-body, heat-proof) nindoor gyms with short, focused sessions
(30–40 minutes) nif it feels like you're melting, you're not
"burning calories" — you're dehydrating
Diet swaps that actually work
You don't need to abandon local food
— just tweak it
Smart swaps nwhite rice → half white, half brown rice nfried samosas → baked or air-fried ncreamy curries → tomato or yoghurt-based nsugary karak → reduced sugar or smaller cup nsoft drinks → lemon water or laban ndates? Keep them. Just don't eat them
like popcorn
