---

THE Quezon City Council passed a resolution urging Mayor Herbert Bautista to order the installation of a LED road monitoring advisory system in major roads in the city. A City Resolution authored by Councilor Allan Butch Francisco aims to address the traffic problem in Metro Manila by installing road monitoring advisory systems. Advanced traffic system, such as the Intelligent Transport System installed in the North and South Expressways, gives traffic updates in real time and localized traffic information is disseminated through LED billboards. Updates on congestion of roads, traffic accident ahead and location of road works are pertinent information also given by the advanced traffic system for motorists to take alternate routes in order to reach their destination faster.
