What is Long COVID?

The Fiji Times · 8 Sep 2021 · 20

Long COVID has been preliminarily defined as the presence of signs and symptoms that develop during or following an infection consistent with COVID-19 which continue for 12 weeks or more.

Typically, it is referred to as acute COVID-19 until 4 weeks and ongoing COVID-19 from 4 to 12 weeks.

Many people living with the disease were previously fit and healthy.

Children experience Long COVID symptoms similar to adults and at about the same frequency.
